

Problem Statement and its relevance

The objective was to develop a program to enable students to get to know about detailed description of events to be organised in Impressions 2019 and to get enrolled in their desired events by creating their unique id.

We have simplified the work of organisers by storing the details of registered users in files using file handling, linked list and basic concepts of C language.

We have provided each user a 100 credit bonus and given them an opportunity to add pop up meal .
